

MiniMicro

MiniMicro

Event Playback (1 Camera System)

Playback video from the MiniMicro is fast and easy. It is equipped with eight sensor inputs for marking events. A search can be conducted by time, date, or "emergency." When in playback mode, the user has the option to choose "fast forward" (at rates of x2, x4, or x8), "rewind," "pause," and "stop." For driver activated event-marking, we enable direct data transfer to a USB 2.0 Memory Key for marked-event viewing on-the-go.

High Resolution Video & Clear Audio

The MiniMicro has crisp video at 720 x 584 resolution for DVD quality playback. Industry-best sound quality is recorded on 1 individual audio channel.

Archiving

Several options are available to save the video. It can be saved on the hard drive or transferred to DVD, VHS, and other forms of archiving. The hard drive can also be directly connected to the computer through a USB reader connection.

Massive Storage Capacity

The latest MPEG4 and JPEG Compression (Switchable) technology provides motion picture quality while offering greater storage capacity. The MiniMicro has the ability to store over 30 days of video on continuous cycling recording.

Security

A key-locking hard drive secures removable hard drive tray. There are no user-selectable buttons on the face of the DVR. All data is securable through password. The removable drive has a separate lock preventing its removal.

FC6000-Camera

Housing

The FC6000 School Bus Camera is designed with a metal cast housing and a shatterproof lens cover. This is a fully Vandal Proof housing.

High Resolution Video & Clear Audio

The FC6000 is equipped with our High Resolution, Wide Dynamic, PeriOptic 6000 Lens. This design will deliver the best picture quality available in the school bus industry. Our High Definition, Large Diaphragm Microphone will record crisp audio with clarity you have never heard from a school bus.

Placement

The FC6000 is designed to be placed on the inside roof of the bus facing back.

Lens Adjustment

Lens adjustment is not necessary as this is set at the factory for perfect angle. IR Standard for DAY and Night view.

Connection

All AngelTrax High Resolution Cameras come with our exclusive 6PIN DIN waterproof shielded cables.

Features:

- ◆ USB data download to thumb drive
- ◆ 2.5" removable 80-250 Gig removable HDD
- ◆ IDE HGDD for low cost "off the shelf" replacement in the future
- ◆ Rock solid Linux OS, for rugged mobile vehicle use
- ◆ Multiple Easy Playback Options
- ◆ Supports up to 250 GB IDE hard drive
- ◆ Remote view (MPEG-\$ or M-JPEG)
- ◆ Tiny size for cramped installation areas
- ◆ Wireless Capable (bridge optional)
- ◆ Panic marker/DVR status indicator button to mark drive and label as "PANIC" for easy review (optional)
- ◆ Eight inputs & auto switches for direction (optional)
